## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mainak H. Mehta on 1/27/11 and 2/1/11.

In the claims:

#### **Claim 1:**

line 1: delete "device for" add -- device having a processor and a memory configured for --

line 2: delete "game field, comprising:" add -- game field representing a field of play of a video game, comprising: --

#### **Claim 4:**

line 2: delete "game field, using a computer," add -- game field representing a field of play of a video game, using a computer, --

#### **Claim 5:**

line 1: delete "A computer" add -- A non-transitory computer --

line 2: delete "game field, in a computer," add -- game field  
representing a field of play of a video game, in a computer, --

**Claim 6 (replace previous claim with following):**

A non-transitory computer readable storage medium storing a program to texture a surface with respect to a game carried out in a game field representing a field of play of a video game in a computer, the program causing the computer to execute the method comprising:

processing game content executed in the game field based on player operations;

calculating, for each texture of a plurality of textures, a value  $\sigma_1$  that varies based on information relating to a view of said surface, said information including an angle  $\theta$  between a viewing direction and a base line, said angle  $\theta$  having a value between 0 and  $2\pi$ , said value  $\sigma_1$  relating to an image composition ;

combining said plurality of textures by combination of pixel value  $P_0$  representing a base model, which is added to a first pattern image data  $P_1 \times \sigma_1$  representing a first model, to generate and store a new pixel value  $P_0 + P_1 \times \sigma_1$ , said new stored pixel value  $P_0 + P_1 \times \sigma_1$  being added to a second pattern image data to create a surface texture and to generate and display the combined plurality of textures on a surface of a substantially planar game field; and

storing said surface texture.

### **Allowance**

The following is an examiner's statement of reasons for allowance:

Patentability seen in, although not limited to Independent Claims 1 & 4-6: A gaming device with processor and memory for rendering a game field on a display representing a field of play of a video game comprising a means of processing game content respective of player operations, changing a value  $\sigma_1$  that varies based on an angle  $\theta$  between a viewing direction and a base line, said angle  $\theta$  having a value between 0 and  $2\pi$ , said value  $\sigma_1$  relating to an image composition, and generating a composite image composed of a pixel value  $P_0$  representing a base model, which is added to a first pattern image data  $P_1 \times \sigma_1$  representing a first model, to generate and store a new pixel value  $P_0 + P_1 \times \sigma_1$ , said new stored pixel value  $P_0 + P_1 \times \sigma_1$  being added to a second pattern image data to generate and display the composite image on the surface of a substantially planar game field. The closest prior art of record does not teach or fairly suggest the claimed method in combination. Iwase (US 5,616,079) discloses a gaming device comprising of a game space calculation unit for controlling a game field/space and processing changes in image composition rates based on player operations. Changes of images (composition rates) are processed based such as the player's viewpoint position, direction of view, view angle information, monitor angle and size information, and light source information. Iwase discloses a image rendering unit that arranges models or polygons of image data stored as texture information, for

Art Unit: 3717

purposes of texture mapping within a three dimensional space. Iwase discloses that the processing unit contains memory that stores the predetermined game program.

However, Iwase excludes changing a value  $\sigma_1$  that varies based on an angle  $\theta$  between a viewing direction and a base line, said angle  $\theta$  having a value between 0 and  $2\pi$ , said value  $\sigma_1$  relating to an image composition, and generating a composite image composed of a pixel value  $P_0$  representing a base model, which is added to a first pattern image data  $P_1 \times \sigma_1$  representing a first model, to generate and store a new pixel value  $P_0 + P_1 \times \sigma_1$ , said new stored pixel value  $P_0 + P_1 \times \sigma_1$  being added to a second pattern image data to generate and display the composite image on the surface of a substantially planar game field.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
